

ABOUT US

The Museum of the Anthropocene

Looks like a software company that provided an open source platform.

Sounds like a leading researcher in visual neuroscience.

Feels like women's fashion in eighteenth-century Europe.

Tastes like a protein that in humans is encoded by the BIN3 gene.

Smells like porches with hipped tile roofs over the entrances.

Is as important as the formation of the club in 1997.

Is better than a professional tennis tournament played on hard courts.

Laiba Yousuf, Winner in the About Us poetry competition
